

ABSTRACT OF THE DISCLOSURE

The present invention provides a multifunctional food wrap comprising a material web, an adhesive, and at least one secondary function. The material web is provided with a plurality of protrusions integral with the material web and having spaces therebetween. The adhesive is disposed within the spaces between the protuberances. The at least one secondary function may be a chemical means or a physical means and disposed within the adhesive, the material web, and/or the protuberances.
